

How to submit assignments for CS180/CS280A.

For each assignment, you will be required to submit two deliverables to Gradescope and share your website link via Google Form to showcase your work alongside your classmates.

Note: Upload exactly **one** .zip file (maximum **100 MB**). Inside that zip, you may include at most **256 files** in total (see [Gradescope docs](#)).

Please upload a .zip adhering to the following structure:

```
submission.zip
├── code/
│   ├── main.ipynb    # or main.py
│   ├── utils.py      # generic example file, not needed
│   └── README.txt    # or markdown
└── web/
    └── page.pdf
```

Starting from Project 2, you should **ALSO** submit the pdf to a separate assignment on Gradescope (marked as "website pdf ONLY"), and tag each part of the assignment to each problem.

1. Code

You should upload code *only* to Gradescope. **Do not host your code publicly.**

- All of your project code should be contained in some `main.py` or `main.ipynb` that the grader / we can run to reproduce your results. If you have a complex workflow, try to simplify it first, and then make sure to upload all the necessary files and include a `README.txt` file describing how we can run your code.
- (If applicable) please be sure to appropriately comment your code so that the graders can appropriately identify where your implementations lie and what they do.
- Place all of your coding files in the `code/` directory. They should be distinct from your web files.

2. Webpage Report

- You should upload a `web/` folder contains `page.pdf`.
- `page.pdf` should be a PDF of your webpage (i.e. printing the page and saving it as a PDF). If you do not already have a webpage set up, we recommend using GitHub Pages ([tutorial](#)).
 - Print your webpage as a PDF with the URL in the header/footer (see image below for the "Headers and footers" option). This allows us to go see your original webpage with your fancy animations

- It's your responsibility to ensure that if your page contains animations or interactivity (which cannot be captured in a PDF), this is clearly communicated, for example, by noting it in the PDF.
- You may consider compressing the PDF file if you hit the 100Mb size limit (e.g. with [this](#))

If you have any comments, even if they're about web and not code, please include them in `./code/README.txt`

3. Google Form

Share your website link through the Google Form (for each project) to showcase your project alongside your classmates' work! This creates a public gallery where everyone can explore each other's projects. The form link will be posted on each respective project page.
